ANTONY ESTHAK TWINSON

Security Researcher | Bug Bounty Hunter | Web Application Security
Email: twinson333@gmail.com | **Phone**: +91 93451 50124 | **Portfolio**: cybertamarin.site
GitHub: github.com/Twinson333 | **Medium**: medium.com/@cybertamarin | **LinkedIn:** linkedin.com/in/antonyesthaktwinson

PROFESSIONAL SUMMARY

Cybersecurity researcher and Computer Science Engineering student with hands-on experience discovering real-world vulnerabilities across multiple platforms. Published CVE author with expertise in web application security, vulnerability discovery, and offensive security techniques. Ranked in the top 2% globally on TryHackMe and experienced in identifying critical issues including XSS, Account Takeover, IDOR, and CSRF. Passionate about vulnerability research, security automation, and building secure software systems.

EDUCATION

B.E. in Computer Science and Engineering – DMI College of Engineering, Chennai
Expected Graduation: May 2026
Relevant Coursework: Web Development, Operating Systems, Secure Coding, Ethical Hacking, Computer Networks

SECURITY RESEARCH & BUG BOUNTY EXPERIENCE

Independent Security Researcher / Bug Bounty Hunter | July 2024 – Present

- Discovered and responsibly disclosed vulnerabilities across 50+ platforms including Google, Ferrari, Nokia, SysAid, HackProve, and Edunet.
- Identified issues including XSS, Account Takeover, IDOR, CSRF, and access control flaws.
- Collaborated with security teams to validate findings and support remediation.
- Performed manual security testing, reconnaissance, and API analysis using industry tools and custom scripts.

TECHNICAL SKILLS

Penetration Testing: Burp Suite, Nmap, Metasploit, SQLMap, API Testing
Web Security: OWASP Top 10, XSS, SQL Injection, IDOR, CSRF, JWT Attacks, API Testing, Access Control
Programming & Scripting: Python, Bash, JavaScript
Systems & Networking: Linux Security, Secure Coding Practices, Computer Networks

ACHIEVEMENTS & CVE DISCOVERIES

CVE 2026 27146 – CSRF vulnerability enabling arbitrary file upload.
CVE 2026 27147 – Stored Cross Site Scripting via malicious SVG upload.
CVE 2026 27161 – Unauthenticated information disclosure vulnerability.
TryHackMe – Ranked in Top 2% globally; completed 160+ labs covering web exploitation, privilege escalation, and penetration testing techniques.

PROJECTS

Web Vulnerability Scanner (Python & Bash) | *https://github.com/Twinson333/vuln-toolkit*

- Automated scanner capable of detecting XSS, CSRF, and CRLF vulnerabilities. Integrated Python detection logic with Bash automation for scalable testing.

Simple Port Scanner (Python) | *https://github.com/Twinson333/PortScanner*

- A lightweight, multi-threaded port scanner written in Python for security research, penetration testing, and network diagnostics.

SECURITY RESEARCH & COMMUNITY

- Publish cybersecurity research and vulnerability write ups on Medium (Cyber Tamarin).
- Participate in CTF competitions and security labs to continuously improve offensive security skills.
